

Traction Wall Mount: Installation Instructions

Getting Started:

1. Choose the area where you want to install the wall mount and locate a stud in the wall.
2. The bottom of the wall mount should be about 4 feet from the floor to best accommodate most patients' heights .
3. Use the 3-inch wood screws to attach the wall mount to the wall stud using a phillips head screwdriver. Make sure to use all 8 screws for a secure mount.
4. Attach the carabiner clip to the hole at the desired height and adjust as needed. Tie knots in the traction rope to fine tune the height if needed.

Includes:

- (1) Wall Mount
- (1) Carabiner clip
- (8) three-inch screws

Tools Needed:

- Phillips head screw driver
- Stud finder

MAINTENANCE: Pettibon System recommends replacing products as needed – especially if they are under continuous use. If wear is noticed, replace IMMEDIATELY.
Clinic use: replace often for maximum benefits.

We recommend consulting with your physician before beginning use of this product. Stop use immediately if any pain is experienced.
